

Digital Buildings Ltd recognises that construction related services can make a major contribution to a more sustainable world. We are committed to proactive environmental management at all levels from local to global, positively influencing key stakeholders, especially customers and suppliers. We maintain organisational structures, management systems, procedures and training plans to ensure, as a minimum, compliance with all relevant laws, regulations and standards. Since line management is responsible for our environmental performance, it is integrated into core business processes and plans. Our vision is to be an industry leader in the way we manage the environmental impacts of our operations during their entire life cycle, actively looking to reduce the negative impacts upon the environment whilst maximising both our own and our stakeholders' opportunities. We will do this by:

- Understanding our stakeholders expectations and requirements with regard to the environment;
- Engaging with the communities and organisations affected by our operations to understand their views and aspirations;
- Ensuring our employees and delivery partners have the competence to continually improve our environmental performance;
- Assessing and reducing the environmental impacts of our work.

Our long term objectives are to:

- Champion the efficient use of energy and strive to reduce emissions of greenhouse gases, particularly carbon, associated with climate change;
- Minimise waste through reducing upfront demand, reusing materials whenever possible and recycling or down cycling;
- Proactively encourage the use of materials that are benign to people and the environment;
- Reduce the demand for, conserve and recycle water resources where possible;
- Proactively work to minimise the impact of our direct operations towards no net loss biodiversity and, where feasible, create biodiversity net gain;
- Reduce harmful emissions to air from our projects, road vehicles, mobile and stationary equipment and processes;
- Minimise the negative impact of our operations on water, land and soil quality.

At DBS we promote a culture of continual improvement, setting objectives and targets for key activities and developing action plans for improvement.
